

Conserve Water Today!

Join the Sonoma County Water Agency in conserving water in your yard and home today. Below are some tips to help you conserve water:

- **Get to know your water meter.** It is an important conservation tool that not only measures the amount of water you use, but can also tell you if there is a leak in your plumbing.
- **Water your lawn in two short cycles rather than one long cycle.** By splitting your watering time in half and by repeating it again about one hour later, you will reduce water runoff and water more deeply, which encourages deeper, healthier root development. It also allows the turf to go without water for longer periods of time.
- **Defer new landscape planting until fall** when planting conditions are more favorable.

And more – visit www.sonomacountywater.org to learn more about water conservation programs and rebates available through your local water supplier.
